DETAILED ACTION

Claim Rejections - 35 USC § 102

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

2. Claims 11-14 and 17-20 are rejected under 35 U.S.C. 102(b) as being anticipated by Tomisawa ET AL (US 5,617,833).

Re claim 11, the reference of Tomisawa et al discloses an apparatus and method for diagnosing exhaust recirculation system of an engine including:

recirculating an exhaust gas from an outlet side of a combustion chamber assemblage via an exhaust gas recirculation conduit to an inlet side of the combustion chamber assemblage (col. 3, lines 36-48);

sensing a pressure curve in at least one combustion chamber; ascertaining a thermodynamic parameter therefrom as an actual value (Figs. 6a and 6b; col. 7, line 37 through col. 8, line 33).

making available a setpoint value of the thermodynamic parameter, the setpoint value taking into account a current operating point of the internal combustion engine col. 2, lines 38-63); and

determining a deviation between the setpoint value and the actual value is determined (col. 3, lines 38-63); and

obtaining from the deviation a datum regarding a current exhaust gas recirculation state, as compared with a normal state thereof (col. 3, lines 38-63).

Re claim 12, as rejected in claim 1 (see the entire document for details).

Re claim 13, see Fig. 6a and 6b.

Re claim 14, see entire document for more details.

Re claims 17-20, see above rejected claims.

3. Claims 11-14 and 17-20 are rejected under 35 U.S.C. 102(b) as being anticipated by Kolmanovsky ET AL (US 6,095,127 B2). Note specification showing a method for monitoring (detecting) an exhaust gas recirculation of an engine by pressure sensing. Also note claims 1-9, which describes the steps of determining and comparing the results of the exhaust gas recirculation.

Allowable Subject Matter

4. Claims 15-16 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

Conclusion

5. Any inquiry concerning this communication or earlier communications from the examiner should be directed to JOHNNY H. HOANG whose telephone number is (571)272-4843.
